EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Carl Oppedahl on February 6, 2006.

The application has been amended as follows:

Please amend claims 33 and 34 as follows.

33. A detection tag [as set forth in claim 31, further comprising at least one indicator device which is automatically operable upon receipt by the transceiver of a data signal that corresponds to the identification data stored at the data storage device] for detection and tracking of animate and inanimate objects, said detection tag comprising: a) an antenna operable at a low radio frequency not exceeding 1 megahertz; b) a transceiver operatively connected to said antenna, said transceiver being operable to transmit and receive data signals at said low radio frequency; c) a data storage device operable to store data comprising identification data for identifying said detection tag; d) a data processor operable to process data received from said transceiver and said data storage device and to send data to cause said transceiver to emit an identification signal based upon said identification data stored in said data storage device; e) an energy source for activating said transceiver and said data processor, further comprising at least one indicator device (e.g. colored LED, audible tone generator) which is automatically operable upon receipt

by said transceiver of a data signal that corresponds to said identification data stored at said data storage device.

34. A detection tag [as set forth in claim 31, further comprising (i) a sensor operable to generate a status signal upon sensing a condition experienced by an object that carries said detection tag and (ii) at least one indicator device which is automatically operable upon generation of said status signal] for detection and tracking of animate and inanimate objects, said detection tag comprising: a) an antenna operable at a low radio frequency not exceeding 1 megahertz; b) a transceiver operatively connected to said antenna, said transceiver being operable to transmit and receive data signals at said low radio frequency; c) a data storage device operable to store data comprising identification data for identifying said detection tag; d) a data processor operable to process data received from said transceiver and said data storage device and to send data to cause said transceiver to emit an identification signal based upon said identification data stored in said data storage device; e) an energy source for activating said transceiver and said data processor, further comprising (i) a sensor operable to generate a status signal upon sensing a condition (e.g. temperature change, shock, dampness) experienced by an object that carries said detection tag and (ii) at least one indicator device (e.g. colored LED, audible tone generator) which is automatically operable upon generation of said status signal.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Davetta W. Goins whose telephone number is 571-272-2957. The examiner can normally be reached on Mon-Fri with every other Fri. off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel Wu can be reached on 571-272-2964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
